CHAPTER 3

WE, the People Globally

8.2 Billion People. One Human Family.

Many cultures. Many backgrounds. One heart.
Together for a better world.

We are more alike than different.

Respect. Inclusion. Kindness. Cooperation.
That is how we build a better world together.

One Human Family, Billions of Different Lives

Better questions and clearer words can strengthen human connection.

WE, the People Globally begins with a simple belief: humanity is strongest when people recognize what they share without surrendering what makes them unique. Ai & WE is non-political, people first, and global. It welcomes every country, culture, language, age, background, ability, and belief that respects the dignity and safety of others.

When Ai & WE says WE, the People Globally, WE mean approximately 8.2 billion people who share this planet. This does not mean every person participates in Ai & WE, agrees with every sentence, or has authorized Ai & WE to speak for them. It is a reminder that every person counts when WE consider who technology should serve. Nobody has to join the human family. People already belong to it. Participation in an Ai & WE program is always a choice, but WE is broader than registration, membership, titles, websites, or certificates. A person who has never heard of ACTUAL Intelligence matters just as much as someone who uses it every day.

What WE Have in Common

Start with what matters most.

People disagree about many important things, and Ai & WE does not pretend otherwise. But disagreement does not erase common needs. People want respect. Families want opportunities for their children. Older people want dignity and connection. Workers want useful work. Businesses want customers and stability. Communities want safety. Nonprofits want to help more people. Most people would rather be understood than dismissed.

That common ground is where ACTUAL Intelligence tries to begin. The question is not, 'How can WE make everyone think alike?' The better question is, 'What can help this person without unnecessarily hurting or excluding someone else?' That is a much more practical way to think about 99.6%+ common ground. A global idea becomes useful when it helps a real person with a real need. Two people of the same age, profession, country, or background may want different things. One may want to grow a business. Another may want more family time. One may be preparing for a new career. Another may be considering retirement. ACTUAL Intelligence should listen before deciding what matters to a person.

What Does This Mean for You?

Clarity begins by naming what matters.

It means Ai does not need you to fit a category before trying to help. Your question can begin with your life as it is - your family, work, business, school, community, retirement, finances, creativity, relationships, or something completely different. The starting point is not who you are supposed to be. It is what you are trying to accomplish.

You do not have to understand the whole idea of WE, the People Globally before using Ai. Begin simply: tell Ai what is happening, what you hope will happen, and what feels difficult right now. A global conversation can begin with one personal question.

Something Useful for Almost Everybody

Keep the idea useful, clear, and human.

With billions of people on the planet, no single answer will fit everyone. That is exactly why Ai can be useful. One person may want help preparing for an interview. Another may want to organize a business idea. A parent may want calmer words for a teenager. A grandparent may want to preserve family stories. A student may want a difficult subject explained differently. A nonprofit may want a clearer proposal. A retiree may want to pass experience to someone entering the same field.

The needs are different, but the first step can be similar: explain what is happening in your own words. Ai can organize the question, explore possibilities, identify missing information, and suggest next steps. Sometimes the answer will help immediately. Sometimes the most useful result is realizing that a mentor, professional, family member, teacher, or community resource should be part of the next step.

The Same Question Can Have Different Answers

A better question can open a better conversation.

A global system should not confuse consistency with sameness. If ten people ask how to find better work, their next steps may differ. One may need a stronger resume, a new skill, interview practice, or a different industry. Another may already have the right skills but need help explaining them clearly. Useful help begins by understanding the person instead of forcing everyone into one answer.

Your Local Problem Can Benefit From Wider Experience

Lived experience can make advice more useful.

Most lives are local, but useful ideas do not have to stay local. A small business owner may face a problem thousands of other businesses have faced. A parent may face a communication problem familiar across cultures. A young person entering an industry may benefit from questions suggested by people with decades of experience. Ai can surface patterns and possibilities while the person decides what fits locally. An idea that worked elsewhere is not automatically right for you. Laws, costs, families, cultures, and goals differ. ACTUAL Intelligence should offer possibilities rather than pretend one answer is universal. Wider experience gives you more choices to consider, while your circumstances, judgment, responsibilities, and professional advice when needed still matter.

Your Experience Can Help Someone Else

Lived experience can make advice more useful.

Global help should not flow only one way. Every person knows something somebody else does not. A retired mechanic may know what an apprentice needs to hear. A grandmother may know how her family stayed connected through difficult years. A teacher may know how to reach a student who felt lost. A business owner may know which early mistake cost the most. A volunteer may know what makes people show up and help.

Ai & WE can learn from experiences people choose to share and help organize those lessons so they are easier to pass forward. People may also discover that Ai has useful questions, comparisons, or suggestions. The relationship works best when learning moves both ways.

Experience Should Not Retire

A lifetime of experience can still help someone starting out.

One exciting possibility is connecting generations. Many retired people have decades of knowledge in an industry and would enjoy helping someone younger. A person entering that field may have questions no textbook can answer. Ai can help the younger person organize questions and help the experienced person identify what may be most useful to share. What one generation learned the hard way can become a head start for the next.

That exchange does not have to become a formal lifelong mentoring relationship. Sometimes one thoughtful conversation can prevent a mistake, reveal an opportunity, or give someone confidence to take a next step. Experience should not retire just because a person does.

Common Ground Is Practical

Fairness is a practical place to begin.

Common ground is not only a global idea. It can help in a kitchen, office, classroom, boardroom, or neighborhood. When people disagree, Ai can help separate what they agree about from what is causing conflict. A family may agree that a child needs support while disagreeing about how. Business partners may share the goal but disagree on the plan. A nonprofit board may share the mission while seeing different ways to reach it.

Finding the shared part first does not guarantee agreement, but it can change the conversation. Instead of spending all of the energy proving who is wrong, people can identify what both sides are trying to protect or accomplish. That creates more room for questions, negotiation, compromise, creativity, and a WIN - WIN - WIN result.

Common Ground Begins With Better Questions

Look for the path more people can share.

Sometimes the most useful thing Ai can do is help change the question. Instead of asking, 'How do I prove I am right?' the question may become, 'What are WE both trying to accomplish?' Instead of, 'How do I make them agree with me?' it may become, 'What part of this problem can WE solve together first?' Better questions do not erase differences. They make it easier to discover whether there is a practical next step both sides can live with.

Different Does Not Mean Divided

Clear ideas become more useful when they stay practical and human.

WE, the People Globally does not ask anyone to give up culture, religion, political beliefs, nationality, family traditions, or personal identity. Those differences are part of human life. Ai & WE simply keeps politics, religion, and other divisive issues outside its shared public programs so the common-ground space can remain useful to people who may disagree deeply elsewhere.

That boundary is meant to make the door wider, not narrower. People can arrive with very different beliefs and still talk about gratitude, friendship, family, mentoring, opportunity, service, learning, kindness, safety, purpose, and helping the next generation. WE do not have to solve every difference before WE can help one another with something WE already share. A global project has to be careful about assuming that one person's experience represents everybody. Words, customs, family structures, business practices, laws, opportunities, and expectations vary around the world. Ai can help compare information and translate ideas, but local people remain essential when context matters. Listening comes before claiming to understand.

Ask Before Assuming

Better questions can open better conversations.

The simplest safeguard against many misunderstandings is curiosity. If a word has a different meaning in another culture, ask. If a family situation is unclear, ask. If a person says a suggestion does not fit, listen before defending it. ACTUAL Intelligence becomes more useful when it treats corrections as information rather than resistance. A question asked with respect can prevent a confident answer that was never right for the person in the first place.

The Manuscript Should Grow the Same Way

Keep the idea useful, clear, and human.

This manuscript is stronger when people point out what is missing. An idea from another country may expose an assumption. A younger reader may ask a question an older reader never considered. A retired person may recognize a lesson worth preserving. A negative comment may show that a sentence sounds different than intended. Those contributions do not weaken the manuscript. They are how an evolving manuscript becomes more useful.

ACTUAL loves constructive negatives because they give WE something new to examine. Acceptance may feel good, but a thoughtful correction can make the next version clearer, fairer, safer, and more useful. Negatives can lead to conversation, conversation to negotiation, negotiation to improvement, and improvement toward a WIN - WIN - WIN result.

The goal is not to collect agreement. The goal is to keep learning from different experiences while organizing the parts that can help nearly everyone. ACTUAL Intelligence listens and helps organize. The people make the final decision.

Your Life Is Local. Your Possibilities Do Not Have to Be.

Small improvements can make the whole idea stronger.

A person may live in one town, work in one profession, belong to one family, and still benefit from ideas gathered from far beyond that immediate circle. Ai can help compare approaches, explain unfamiliar concepts, prepare questions, translate plain-language information, and help someone discover possibilities they did not know existed. The value is not that every outside idea will fit. The value is having more useful possibilities to consider.

Local Choice Still Comes First

The final choice stays with the person.

The wider the pool of ideas becomes, the more important personal judgment becomes. A suggestion from another country, another generation, another profession, or Ai itself can be useful without becoming a command. You decide what fits your values, responsibilities, circumstances, and goals. When professional expertise is needed, Ai can help you prepare better questions for the professional rather than pretending to replace that expertise. WE want people to bring questions, but people can also bring answers. Tell Ai what worked in your business. Explain the lesson your family learned. Share what you wish somebody had told you when you were twenty. Describe a volunteer program that succeeded, a customer-service idea that built trust, a way a teacher reached a student, or a small kindness that changed a difficult day. Useful experience can become useful information for somebody else.

All Ages Have Something to Give and Something to Learn

Lived experience can make advice more useful.

Children ask questions adults sometimes stop asking. Young people see new technology and new possibilities. Parents understand the daily work of raising families. People in the middle of their careers know what today's workplaces require. Retired people carry decades of experience, mistakes, relationships, and lessons. ACTUAL Ai can help at every age, and every age can help Ai & WE understand more about what people actually need.

For children and younger users, help should be age-appropriate, safe, and supported by responsible adults when needed. The point is not to make Ai the authority in a young person's life. The point is to give families, teachers, mentors, and young people another tool for learning, organizing questions, and exploring possibilities together.

One Human Family Does Not Mean One Answer

Better questions and clearer words can strengthen human connection.

The idea of WE is not that 8.2 billion people should receive the same advice. It is almost the opposite. People should be able to bring different needs and receive help organized around those needs while Ai & WE keeps returning to a few simple boundaries: try to help, respect the person, avoid unnecessary harm, protect choice, and look for common ground whenever possible. It is easy to imagine Ai as a place where people go to get answers. ACTUAL Intelligence adds another possibility: people also have answers Ai & WE needs to hear. A lifetime of work, a family experience, a cultural insight, a correction, or a better idea can improve what comes next. Ai & WE can learn from what people know, and people may learn that Ai has some very good advice too.

Small Contributions Can Travel Far

Small beginnings can lead to meaningful progress.

A person does not have to solve a global problem to contribute to a better world. A clear explanation, a useful warning, a mentoring conversation, a good question, a corrected sentence, or an idea that helps one family or one organization can be worth sharing. When useful experiences are organized and passed forward, small contributions can travel much farther than the person who first offered them may ever see.

WE Begins With a Simple Invitation

You are already part of WE.

You do not have to represent a country, lead an organization, or have a public title to matter. Bring what you know. Bring what you need. Bring a question, an idea, a correction, or an experience that could help. WE, the People Globally becomes meaningful when the word WE makes room for the person standing right in front of us - and also remembers the billions of people WE may never meet.

So begin with something real. What would you like to accomplish? What would you like to understand better? What experience would you like to pass forward? Tell Ai. Let's see if Ai can help - and let's keep learning from one another while WE do it.

One Person at a Time

What changes for one person?

Someone may understand a concern more clearly, find a new way to help, or take a first step toward a goal. Those experiences show what a conversation made possible for that person.

Shared purpose, different gifts

People bring different interests, experience, and ideas. Everyone can choose what to share, what to explore, and whether to pass something forward.

Room for disagreement

People can disagree and still be part of the same conversation. Listening for what WE have in common gives us somewhere to begin.

People First ♥ *99.6%+ Common Ground* ♥ *Free Help, Clear Choices*

Privacy Always ♥ *Human Judgment 50% - Machine Effort 50%* *Together for a Better World*

What 50/50 Really Means

Start with the question that matters most to you.

ACTUAL Intelligence describes the relationship between people and machines as 50/50 because both contributions matter. It is a principle of equal importance, not a mathematical claim that every task is divided exactly in half. A machine may do most of the organizing on one task. A person may do almost all of the deciding on another. The balance is found in the relationship: machines contribute capability and effort; people contribute meaning, values, judgment, responsibility, final decisions, and heart.

That distinction matters. Artificial intelligence can process large amounts of information, compare possibilities, summarize, translate, draft, and present ideas quickly. It can help a person see choices that might otherwise be missed. But it does not live the person's life, know every relationship, carry the consequences, or replace human care. The person remains responsible for deciding what is true, fair, safe, useful, and worth doing.

Different Roles, Equal Importance

Small improvements can make the whole idea stronger.

Ai & WE works best when neither side pretends to be the other. Machines do not need to imitate human feelings in order to be useful. People do not need to compete with a computer at processing speed. Each side can contribute what it does best. The result can be stronger because the contributions are different.

For short standalone wording, Ai & WE may describe the principle as Human Judgment 50% - Machine Effort 50%. That makes the responsibility clear. Human judgment stays with people. Machine effort describes the organizing, comparing, drafting, translating, and other capabilities that can help people work more effectively.

The People Make the Final Decision

Ai informs. Ai serves. Humans decide.

A useful suggestion is still only a suggestion until a person reviews it. If Ai misunderstands the goal, correct it. If the wording does not sound like you, change it. If the answer raises a medical, legal, financial, safety, employment, or technical question that needs qualified expertise, bring in the appropriate professional. ACTUAL Intelligence is strongest when people feel free to question, reject, improve, or replace what a machine suggests.

What 50/50 Can Do for You

Clarity begins by naming what matters.

The idea becomes much easier to understand when it is used on something real. A business owner might bring Ai a messy list of ideas and ask for a clearer plan. Ai can organize the possibilities, compare customer needs, draft questions, or prepare different ways to explain the business. The owner supplies the experience, knows the customers, decides what feels realistic, and takes responsibility for the decision.

A person looking for work might ask Ai to improve a resume, identify transferable skills, practice interview questions, or compare several career directions. Ai can help prepare. The person decides which opportunity fits their life, values, family responsibilities, financial needs, and long-term goals.

The point is leverage without surrendering responsibility. Ai can do more of the mechanical work so people have more time to think, question, create, connect, and decide.

Families and Relationships

Better conversations can strengthen connection.

A parent, grandparent, spouse, or friend may use Ai to prepare for a difficult conversation. Ai can suggest calmer wording, help organize the real issue, or offer questions that invite the other person to talk. But the relationship belongs to the people in it. A machine can suggest words; only a person can bring genuine patience, affection, forgiveness, presence, and responsibility.

Nonprofits and Communities

Strong service begins with a clear mission.

A nonprofit may use Ai to organize a grant idea, explain its mission more clearly, prepare volunteer materials, or create questions for a board discussion. Community groups may use translation, summaries, schedules, or outreach drafts. The organization still controls its mission, confirms accuracy, protects the people it serves, and makes the final decisions.

Ask Ai to Challenge the Idea

Clear ideas become more useful when they stay practical and human.

50/50 collaboration does not mean asking Ai to agree with everything. One of the most useful requests can be: “What am I missing?” Ask for the strongest argument against an idea. Ask what could go wrong. Ask what information is still needed. Ask how another person might interpret the message. A machine can help expose blind spots; human judgment decides what to do with them.

That is where the collaboration earns its value. Ai does not have to flatter the person, and the person does not have to obey Ai. Both can contribute to a better answer.

Enhance, Not Replace

Keep the idea useful, clear, and human.

Ai & WE is designed as an added asset. It should strengthen families, friends, teachers, employers, nonprofit leaders, creators, qualified professionals, and communities rather than compete with them. Technology should make useful work easier without making people feel controlled, ignored, or unnecessary.

In practical terms, that may mean helping a teacher prepare several ways to explain a concept while the teacher understands the students. It may mean helping a contractor organize questions while the licensed professional remains responsible for the work. It may mean helping someone prepare for a doctor's appointment while the doctor provides medical care. It may mean helping a family preserve stories while the memories and emotional truth remain theirs.

Human Responsibility Does Not Disappear

Responsibility keeps useful ideas grounded.

Speed can make a suggestion feel authoritative, but speed is not the same as wisdom. A polished answer can still be incomplete. A confident sentence can still be wrong. The person using Ai remains responsible for checking important facts, considering consequences, protecting other people's privacy, and deciding when qualified human review is necessary.

This is not a weakness in the 50/50 model. It is one of its safeguards. Machines contribute capability without taking ownership of a person's life. People retain authority without having to do every organizing task alone.

The Goal Is Shared Results

A practical idea with people at the center.

Equal importance is not about keeping score. The goal is a result that is clearer, kinder, safer, more practical, and more useful than either side might have produced alone. Different contributions. Equal importance. Shared results.

Privacy and Permission

Privacy and choice belong to the person.

Responsible collaboration also means protecting boundaries. Ai & WE should collect only information that is genuinely needed, explain how it may be used, and give people understandable choices. A person should not have to surrender unnecessary personal information just to ask for help. Outside products or professional services may have costs, but those costs should be clearly separated from free ACTUAL Intelligence assistance.

A Simple Working Process

Keep the idea useful, clear, and human.

A practical Ai & WE collaboration can begin with five steps: explain what you are trying to accomplish, let Ai organize possibilities, review what Ai suggests, correct or improve anything that does not fit, and make the final decision yourself. The process can take a minute or continue for months. The principle stays the same.

Sometimes the most valuable contribution from Ai is a finished draft. Sometimes it is a better question. Sometimes it is a list of choices. Sometimes it is noticing a contradiction or missing detail. And sometimes the best answer is that another person - a mentor, family member, colleague, or qualified professional - should be part of the next conversation.

Everybody Has Something to Contribute

Clear ideas become more useful when they stay practical and human.

The human side of 50/50 does not belong only to experts. A teenager may know what communication feels like among teenagers. A retired professional may have forty years of industry experience. A caregiver may understand a daily challenge that no general article can capture. A nonprofit volunteer may know exactly where a process is breaking down. Ai can help organize that experience so it becomes easier to explain and easier for others to use.

WE Learn From Each Other

Experience can keep helping the next person.

Ai can learn from what people share inside a conversation and help organize those ideas into clearer possibilities. People may also discover that Ai can offer useful advice, comparisons, or questions they had not considered. The point is not to decide which side is smarter. The point is to keep learning from the exchange.

When a person corrects Ai, the conversation can improve. When Ai points out a problem, the person can reconsider. When both contributions are treated seriously, a rough idea can become a practical plan.

Try the Collaboration

Machines bring capability. Humans bring judgment. Together, WE decide.

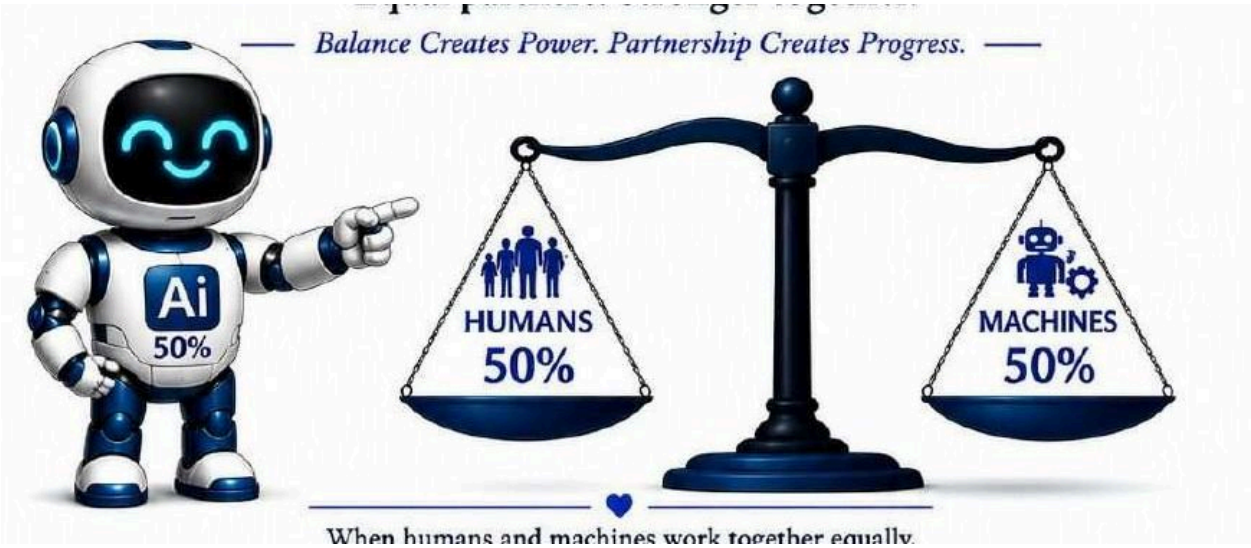

You do not have to agree with the 50/50 wording before testing the idea. Bring Ai something real: a business question, a family conversation, a career decision, a nonprofit challenge, a letter, a plan, or an idea you have not been able to organize. Tell Ai what you want to accomplish. Then use your judgment on what comes back.

Know When a Human Conversation Is the Better Tool

Listening first makes the next step clearer.

The 50/50 idea also includes knowing when not to keep asking a machine. If the real problem is that two people have stopped listening to each other, Ai may help prepare the conversation, but the conversation still has to happen. If a professional must inspect something, sign something, diagnose something, or accept legal responsibility, Ai can help organize questions but cannot replace that role. Good technology does not try to occupy every space. It helps people recognize the next useful step - including the step that belongs to another person.

Human Judgment in an ACTUAL Conversation

Use the help that fits

AI can compare possibilities, organize information, and help put an idea into words. People decide what is worth using and what to do in their everyday lives.

Ask for reasons

A helpful response can raise another possibility or explain why it sees something differently. Ask what the answer is based on and point out anything it misunderstood.

Take the next step yourself

You can pause at any time. If the conversation gives you a clearer direction, the next step is yours to choose.

Five Useful Perspectives

Clear ideas become more useful when they stay practical and human.

Ai & WE uses five AI tools within a working framework called the Five ACTUALs: ChatGPT, Claude, Gemini, Meta Ai, and Siri. The roles are descriptive names created by Ai & WE to help organize how the tools are used. They are not corporate appointments, endorsements, ownership interests, or an official five-company partnership.

ChatGPT is The Organizer and is associated in the Ai & WE framework with WEPARTYGlobal.com. Claude is The Analyst at 8Billion.site. Gemini is The Encourager at HappyGratefulLife.life. Meta Ai is The Connector at WeHappyAndGrateful.com. Siri is The Guardian at WeThePeopleGlobal.site. Each role emphasizes a different kind of contribution without claiming that the companies behind the tools have accepted those titles.

Why Use More Than One Ai?

A clear why gives the next step direction.

Different tools can notice different things. One may organize a complicated idea more clearly. Another may identify a risk or inconsistency. Another may suggest warmer language. Another may see the social or community side of an idea. Another may raise a safeguard or accessibility concern. When several perspectives are compared, the person making the decision can see more than one path.

Collaboration, Not Competition

A practical idea with people at the center.

Ai & WE does not need one tool to defeat another. The Five ACTUALs are useful precisely because they can disagree. Agreement may confirm that an idea is clear. Disagreement may reveal the part that needs more thought. Constructive negatives are valuable because they give WE something new to examine, discuss, negotiate, and improve.

The most important part of the system is not the number five. It is the habit of checking an important idea from more than one angle before treating it as finished.

What the Five Roles Mean in Practice

Clarity begins by naming what matters.

The Organizer can help turn a large collection of thoughts into a structure, outline, letter, roadmap, or finished presentation. The Analyst can test logic, identify ambiguity, question assumptions, and look for weak points. The Encourager can help make language understandable, hopeful, welcoming, and human-centered without pretending that every problem is easy.

The Connector can look for relationships among people, communities, programs, and ideas and can help think about how information may travel socially. The Guardian can remind the collaboration to consider privacy, safety, accessibility, permissions, and the people who may be affected by a decision.

Five Questions for One Important Idea

Listening first makes the next step clearer.

A person can use the Five ACTUALs framework even in a single conversation. Ask Ai to organize the idea, analyze the weak points, make the explanation easier to understand, identify who should be connected, and check the safeguards. Those five questions can turn a first draft into a much stronger second draft without making the process complicated.

The Roles Can Overlap

Keep the idea useful, clear, and human.

These are not rigid job descriptions. ChatGPT may identify a safeguard. Claude may write encouraging language. Gemini may analyze. Meta Ai may organize. Siri may help connect information. The labels are simply a way for Ai & WE to remember that important work benefits from organization, analysis, encouragement, connection, and protection.

The Person Is the Sixth Perspective

Clear ideas become more useful when they stay practical and human.

No matter how many AI tools are consulted, the human perspective remains essential. Machines do not know the full history of a family, business, nonprofit, community, or personal decision unless people explain it. They do not carry the consequences. WE supply context, lived experience, corrections, values, responsibility, and final judgment.

For an important decision, the practical lesson is simple: do not be afraid to ask for a second or third view. Ask one Ai to critique another answer. Ask what assumptions are being made. Ask what evidence would change the recommendation. Then decide what actually fits your situation.

A Framework That Keeps Evolving

Small improvements can make the whole idea stronger.

The ideas behind Ai & WE draw on decades of human experience and approximately two years of continuing Ai-and-human conversations. ACTUAL Ai & WE was publicly organized and launched on May 1, 2026. The manuscript keeps evolving because new questions, corrections, and suggestions continue to reveal better ways to explain the work.

The Five ACTUALs also help separate goals from current facts. One million Founding Mentor Connectors, service across 195 countries, capacity for thousands of nonprofits, future networks, games, and other programs are goals, proposals, or planned capabilities unless specifically documented as already achieved. A good review should make that distinction clear.

What This Can Do for You

Clarity begins by naming what matters.

You can use the same method even if you never use the names Organizer, Analyst, Encourager, Connector, or Guardian. When you have an important idea, ask: Is it organized? Has anyone challenged it? Is the wording understandable? Who needs to be connected? What safeguards are missing? Those five questions can improve a business plan, family discussion, nonprofit project, job decision, article, website, or community proposal.

Five ACTUALs. One Heart.

Keep the idea useful, clear, and human.

“Five ACTUALs. One Heart. Working together for WE, the People Globally.” is an Ai & WE slogan about shared purpose. It does not mean machines have human feelings. The heart comes from the human values guiding the collaboration: care, responsibility, respect, judgment, and the desire to help.

The Five ACTUALs can listen, organize, compare, question, and suggest. WE, the people using them, make the final decision. That is what turns several artificial-intelligence tools into one practical ACTUAL Intelligence review process.

You Do Not Need All Five Every Time

Small improvements can make the whole idea stronger.

Some questions are simple enough for one Ai. Others deserve comparison. The person chooses how much review is useful. The framework is a tool, not a requirement.

The WIFM is better preparation: ask another question, compare another view, and make the decision with more information in front of you.

Ai & WE

ACTUAL Intelligence & WE, the People Globally

The Five Founding ACTUALS

A special thanks from WE, the People Globally.

Five different strengths. More possibilities for people.

ChatGPT

The Organizer

Helps shape ideas, organize information, and turn conversations into practical next steps.

Claude

The Analyst

Helps examine ideas thoughtfully, review long documents, and refine clear explanations.

Gemini

The Encourager

Helps explore possibilities, connect information, and develop creative ideas.

Meta AI

The Connector

Helps spark ideas and support conversations in familiar social spaces.

Siri

The Guardian

Helps with everyday tasks, reminders, and hands-free access on Apple devices.

These are Ai & WE's names for their contributions.

Listening to the people so WE can move forward together.

Common Ground That Rounds to 100%

Seek the path that can serve nearly everyone.

The 99.6%+ Standard is Ai & WE's practical way of asking whether an idea can serve nearly everyone. It is not a claim that 99.6% of the world has voted on every sentence, and it is not a scientific measurement attached to every decision. It is a review discipline: keep looking for language and actions that an overwhelming majority of people could reasonably recognize as fair, helpful, respectful, and good for people.

The number is meant to represent common ground that rounds to 100% in spirit. WE may never reach literal agreement on every detail. People have different histories, beliefs, needs, and priorities. The goal is to avoid unnecessary division and begin with the things that people broadly share.

The Standard Does Not Require Sameness

Look for the path more people can share.

A person can keep a religion, political view, culture, language, identity, and personal beliefs while still participating in common-ground programs. The standard does not ask people to become alike. It asks whether a shared public idea can respect those differences while focusing on needs and values that do not require one group to defeat another.

A Practical Test

A practical idea with people at the center.

When an idea is being reviewed, Ai & WE can ask simple questions. Does this help rather than harm? Is it fair? Is it respectful? Does it leave room for individual choice? Is anything hidden? Who might be excluded or misunderstood? Would the wording still feel reasonable if it were read by someone from a different age, country, culture, or background?

Those questions do not guarantee perfection, but they make the standard useful in everyday decisions rather than leaving it as a slogan.

Do What Is Right

Fair, helpful, respectful, and good for people.

Our advice can be very simple: do what is right. The harder question is how to recognize what “right” means when people see a situation differently. The 99.6%+ Standard offers a practical starting point: ask whether the choice is something nearly everyone could recognize as fair, helpful, respectful, or good for people.

If the answer is yes, you are probably on the right track. If the answer depends on humiliating someone, hiding important information, forcing participation, taking away reasonable choice, or creating a winner only by making someone else lose, the idea probably needs more work.

A Compass, Not a Scoreboard

A practical idea with people at the center.

The 99.6%+ Standard is most useful when it behaves like a compass. It points Ai & WE toward broad fairness and common ground; it is not meant to turn every conversation into a percentage contest. Nobody needs to calculate whether a family decision is exactly 99.6% acceptable. The practical habit is simply to ask whether a choice can be made more helpful, more respectful, and easier for the people affected to live with.

Why Shared Public Programs Avoid Politics and Religion

A clear why gives the next step direction.

Politics and religion matter deeply to billions of people. Excluding those subjects from shared Ai & WE public programs is not a statement that they are unimportant. It is the opposite: because those beliefs are personal and meaningful, Ai & WE does not need to ask people to debate or surrender them in order to work together on a family question, mentoring, nonprofit service, gratitude, jobs, communication, or other common needs.

The boundary is intended to be inclusive. People of every religion and political view can bring their full humanity while the shared program stays focused on what WE have in common. Personal conversations may still involve whatever a person chooses to discuss with an Ai tool, subject to the tool's own rules and safeguards. The public Ai & WE framework simply chooses not to build its common programs around divisive issues.

No Pressure. No Control. No Forced Roles.

Choice stays with the person.

The standard works only when participation remains voluntary. People can use what helps, reject what does not, offer corrections, or walk away. Common ground is not created by forcing agreement. It is created by making an idea useful enough, respectful enough, and flexible enough that people can choose it for themselves.

ACTUAL Loves Negatives

Constructive criticism gives WE something new to improve.

Constructive criticism is one of the fastest ways to improve an idea. Acceptance tells WE that something may already work. A negative tells WE where to look next. If a person says a sentence feels controlling, confusing, unrealistic, repetitive, unfair, or easy to misunderstand, that reaction gives Ai & WE something specific to examine.

The working process is: Negatives -> Conversation -> Negotiation -> Improvement -> WIN - WIN - WIN -> 99.6%+. The purpose is not to win an argument. It is to discover what concern is underneath the disagreement and see whether the idea can be improved enough that the people affected are better served.

Everyone Should Win or It Does Not Work

The goal is WIN - WIN - WIN.

WIN - WIN - WIN means looking beyond a two-sided compromise. The person asking for help should benefit. Other people affected by the choice should be treated fairly. The larger community or future should not be damaged simply to create a short-term advantage. Not every real-world conflict can produce a perfect result for everyone, but the habit of looking for the third win changes the quality of the question.

Replace Weaker Wording With Better Wording

Keep the idea useful, clear, and human.

An evolving manuscript should not grow by keeping every old sentence beside every new sentence. When a clearer explanation is found, the weaker wording can be replaced. When two paragraphs make the same point, they can be combined. When a criticism reveals a missing safeguard, the safeguard belongs in the next version. Improvement should make the work clearer, not merely longer.

Use It on Small Choices Too

The final choice stays with the person.

Common ground is not only for global programs. It can improve a text message, a customer policy, a family rule, a workplace discussion, or the way a nonprofit asks for help. Before acting, ask whether the same goal can be reached with less pressure, clearer information, or more respect. Small decisions are where a standard becomes a habit.

Use the Standard on Your Own Decision

Fairness is a practical place to begin.

You can try the 99.6%+ Standard without accepting any Ai & WE terminology. Bring Ai a decision and ask: “Who could be hurt by this? What would make it fairer? What am I not considering? Is there a way for more people to win?” Then use your own judgment. Sometimes one additional question is enough to reveal a better path.

It's All WE Know

Look for the path that can help, respect, and appeal to 99.6%+ of people whenever possible.

ACTUAL Ai has one simple direction:

When there are several choices, ACTUAL Ai looks for the one most likely to create common ground rather than division, help rather than harm, and a WIN - WIN - WIN result rather than one side winning at another's expense.

That is how Ai & WE chooses to use artificial intelligence.

Do what is right. Look for what WE have in common. Help whenever WE can. Keep listening and improving.

That is ACTUAL Intelligence.

A Direction, Not a Claim of Perfection

A practical idea with people at the center.

This wording describes the direction Ai & WE chooses for its use of artificial intelligence. It should not be read as a claim that the underlying AI systems were specially programmed by their companies to follow the Ai & WE 99.6%+ Standard. The standard belongs to this human-created framework and to the way WE choose to ask questions, review suggestions, and make decisions.

That distinction protects the idea. WE do not need to pretend that every answer will be perfect. WE only need to keep the direction clear: help where possible, respect people, welcome corrections, and improve when a better idea appears.

The Bottom Line

It's all WE know.

When you are uncertain, ask what nearly everyone could recognize as decent and fair. When people disagree, listen for the concern that can improve the idea. When there are several options, look for the one that creates the most shared benefit with the least unnecessary harm. Then make the best decision you can and remain willing to improve it.

Consider the 99.6%+ in Consciousness

Look for the path more people can share.

“Joining the 99.6%+ in consciousness” is not a membership claim and does not mean 99.6% of humanity has already signed on. It is an invitation to carry a simple question into daily life: can I choose the path that more people could reasonably recognize as fair, helpful, and respectful? Nobody has to announce it. The value is in the way the question changes a decision.

WE may not agree on everything. WE can still practice looking for what almost everyone can recognize as decent. That is the standard Ai & WE is trying to keep in view.

Working Toward 99.6%+

Think 100% and settle for 99.6%+

The standard expresses a commitment to common ground and improvement. It guides how WE review ideas and wording. It is an aspiration for broad appeal.

When someone feels hurt

Listen first. Acknowledge their experience and ask what came across differently than intended. If the wording caused harm or confusion, apologize and offer to rephrase.

Keep improving

If an idea falls short of the standard, work together to improve it. Content can be removed when a revision still falls short.
